

Mohammed Abdullah

Experienced System & Support Engineer | Cloud & DevOps Engineer | Multi-Cloud Infrastructure
+966-560383253 | mo.abdullah.core@gmail.com | <https://moabdullahcore.github.io/abd-cloud-core/>

Professional Summary: DevOps and Cloud Engineer with 7+ years of experience in Kubernetes-based environments and cloud migration projects, specializing in application readiness assessment, dependency validation, and CI/CD automation. Proven ability to support end-to-end migration initiatives from on-premise to cloud, ensuring minimal downtime and high system reliability. Strong expertise in Linux, networking fundamentals, and troubleshooting complex production issues.

Professional Certifications & Recognition

Certified Kubernetes Security Specialist (CKS) | Certified Kubernetes Administrator (CKA) | AWS Certified Solutions Architect (SAA-CO3) | Azure Administrator (AZ-104) | Azure Fundamentals (AZ-900) | CCNA (Routing & Switching) | MCSA: Windows Server | PCEP - Certified Entry-Level Python Programmer | Server Virtualization with Hyper-V (Exam 409)
Verify all certifications at: <https://www.credly.com/users/abdullah-cert>

Core Technical Skills

Cloud Platforms: AWS (EC2, EKS, Lambda, VPC, IAM, S3, CloudWatch, EBS), Azure (VM's, VNET, AKS, Resource Groups),
DevOps & IaC: Terraform, Ansible, Azure Devops, CI/CD Pipelines, Helm Charts, Packer, Git,
Containers & Microservices: Kubernetes, Docker, Helm, Microservices Architecture
Programming & Scripting: Python, Bash, PowerShell
Monitoring & Observability: Prometheus, Grafana, Azure Monitor, Log Analytics, APM concepts

Professional Experience

Jsoma Enterprise Pvt. Ltd.

Infrastructure Engineer

Hyderabad

04/2025 - 05/2026

Led DevOps and cloud enablement for a startup by designing and deploying AWS infrastructure, establishing CI/CD pipelines, and implementing DevSecOps practices.

- Automated infrastructure provisioning using **Terraform modules** integrated with Python/Bash scripts, reducing manual deployment effort by 40% and improving consistency across environments
- Configured cloud networking components including **VPCs, subnets, routing tables, NAT Gateways, security groups**, and load balancers to ensure secure connectivity and high availability.
- Performed application readiness assessments by validating configurations, environment variables, and external dependencies before deployment.
- Monitored cloud infrastructure using CloudWatch, Prometheus, Grafana, and Datadog, proactively identifying and resolving performance and availability issues.
- Performed troubleshooting and root cause analysis for cloud, networking, and application-related incidents, ensuring minimal downtime and service disruption.
- Managed containerized workloads on Kubernetes, performing configuration validation, resource optimization, and troubleshooting pod failures, improving system reliability during deployments
- Conducted **deep log analysis and root cause identification** using kubectl logs / debug, system logs, and monitoring tools, reducing incident resolution time by **30%**
- Troubleshot Kubernetes issues (pod scheduling, networking, resource limits), improving cluster performance.
- Implemented Identity and Access Management (IAM) policies, role-based access controls, and security best practices to strengthen cloud security posture.

Capgemini, (Client-Avaya) & Avaya

Technical Specialist

Hyderabad

08/2021 - 02/2025

Promoted to direct Avaya role in August 2023 based on performance and technical expertise

- Partnered with customers and business partners to integrate Avaya Aura systems (SM, SBC, CM, AMMG) in deploying the application over Cloud-native platforms
- Implemented **GitOps**-based continuous delivery workflows using **ArgoCD** for automated, version-controlled Kubernetes application deployments across multiple environments.

- Engineered and maintained Kubernetes infrastructure on **AWS EKS**, ensuring optimal cluster performance, scalability, and operational reliability.
- Troubleshoot **microservices-based workloads** on Kubernetes, resolving pod failures, networking issues, and resource constraints in production environments
- Integrated **Prometheus with Grafana dashboards** to visualize key performance indicators (KPIs) such as pod latency, node utilisation, and API response times.
- Orchestrated end-to-end deployment and lifecycle management of microservices using **Kubernetes, Docker, Helm, and CI/CD automation pipelines**.
- Utilized **Headlamp** for real-time Kubernetes cluster visualization, simplifying troubleshooting of pods, deployments, and services.
- Collaborated with **Site Reliability teams** and Product Development groups to resolve customer-impacting incidents and implement optimal solutions(**SLOs, SLIs, and alert thresholds**).
- Monitored and **optimized EKS cluster health**, application availability, and resource utilization using **Prometheus** and **Grafana** for proactive incident management.
- Managed containerized workloads using Docker and Kubernetes (AKS), ensuring reliable application deployments
- Supported governance and compliance initiatives by enforcing security best practices, encryption standards (TLS, SRTP), and secure authentication mechanisms
- Configured and administered **Kubernetes** networking, **ingress controllers, RBAC, secrets** management, and Pod security policies to strengthen cluster security and governance.
- Managed multi-platform environments including Linux, Unix, and virtualized systems, ensuring optimal performance

Goldstone Technologies Limited (BlueJeans Networks)

Technical Analyst

Hyderabad

07/2017 - 12/2018

- Led integration and configuration of enterprise video conferencing systems (Polycom, Radvision, Lifesize, Tandberg) with BlueJeans Network platform.
- Diagnosed video/audio quality issues in H.323/SIP environments using Wireshark and WebRTC logs, improving call quality.
- Analysed network metrics (packet loss, jitter, RTT), ensuring 95% compliance with performance standards
- Supported large-scale events with 10,000+ concurrent participants; identified platform vulnerabilities and coordinated fixes

Foray Software Private Limited (TCS - ICICI LOMBARD)

System Engineer

Hyderabad

04/2016 – 02/2017

- Managed 100+ production servers across Windows and UNIX; executed installations, upgrades, and maintenance.
- Implemented HP OpenView monitoring, reducing mean time to detection by 40%
- Led Windows Server 2008 to 2012 migration for 80+ servers, completing 15% under budget with zero data loss
- Optimised IIS application pools and VMware resource allocation, improving performance by 25%

Academic Qualification

- | | |
|--|-------------|
| • M.Tech in Computer Networks and Information Security | 2015 – 2017 |
| • B.Tech in Electronics and Communication Engineering | 2010 - 2014 |

KEY TECHNICAL PROJECTS

Accessible Over: [Github.com/Ab-Cloud-dev](https://github.com/Ab-Cloud-dev)

AWS Serverless 3-Tier Architecture - Student Management System

Built full-stack serverless application using S3, CloudFront, API Gateway, Lambda, and DynamoDB. Implemented RESTful API endpoints for CRUD operations with IAM-based security. Configured CloudFront CDN for global content delivery with automatic scaling and pay-per-use cost optimization.

AWS Infrastructure Automation

Created Lambda-based automation for cross-region EBS backups and S3 file transfers with DynamoDB audit logging, implementing comprehensive error handling and monitoring across multiple AWS regions.
